SYSTEM FOR AND METHOD OF PRINTING IMAGE
ACCORDING TO CONTROLLED STATE OF USER MONITOR

BACKGROUND OF THE INVENTION

5 Field of the Invention

The present invention relates to an image
print system and an image print method, and more
particularly to an image print system and an image
print method which are preferably applied for printing
10 at a server image data that are transmitted from any
multiple users to the server through a telecommuni-
cations network such as the Internet.

Description of the Background Art

15 Recently, digital image pickup devices such
as electronic still cameras have been spreading which
can store and output picked-up images in the form of
digital image data. The image data produced from such
image pickup devices can be processed and edited by a
20 processor like a personal computer. The image data
provided in a processor can be edited to desired
images as being viewed on a display device such as a
CRT (cathode-ray tube), and the image data representing
an edited image are supplied to a printer, e.g. a high
25 resolution printer, to be printed, for example.

Since there are a lot of types of image
pickup devices, printers and display devices with
various characteristics, the processors must meet
30 various demands of these device types so as to achieve
image processings and reproduce images as desired by
the users.
